

Town of Mount Pleasant New Water and Sewer Department building

Design Data

Owner

Town of Mount Pleasant, New York

Location

Mount Pleasant, New York

Total Project Cost

\$2,450,000.00

Project Features

- site grading
- site utilities
- water
- sewer
- communications
- power

The Town of Mount Pleasant required a New Water and Sewer Department building. The New municipal building houses the Town's Water and Sewer Department and includes a garage for 15 department vehicles, and administration. As part of the project PCI provided engineering services for the site grading, site utilities including provisions for the water, sewer, communications, and power. As the engineer providing construction administration services on the water storage tanks our firm was able to aid in the smooth integration of the utilities and infrastructure for both projects.

PCI provided design during construction and full time construction management on this multiple prime contract, both in the field and in the office.
